

In Class Activity Sheet – Fabulous Food Chains

Today, you're the scientist! Help our CCMI Educator to identify a couple food chains that we encounter on the coral reef during our live dive. Please use the example food chains below to help you understand, draw, and label the plants or animals you see with our CCMI Educator during the dive, creating a food chain on the two blank food pyramids below. Don't forget to start with primary producers and ending with apex predators! If you have any questions about your food chain, don't forget to ask our CCMI Educator. Thanks for your help today and enjoy the dive!
